VERAE TIME × ZAPIER

Provenance

[site/docs/08-sources/provenance.md](#)

Provenance

This workspace composes three existing trees. Canonical work after import is here ([/Users/marchon/apps/zapier](#)). Originals were not deleted.

Package / tree	Imported from	Role
packages/zappier (zappier-edge)	Standalone git tree /Users/marchon/zappier (no GitHub remote; published at https://git.georgelambert.org/marchon/zappier-edge)	Billing and user middleware: custom rate card, tiers, API keys, customer portal, admin users, Stripe meter, PO invoices, usage ledger. Demo /v1/transform and /v1/storage are not Verae.
packages/verae-zapier-middleware	/Users/marchon/datacubes/verae-zapier-api/verae-zapier-middleware	Verae timestamp adapter: /zapier/v1/*, MOCK_VERAE, NATS workers, REST Hooks. Coarse PLAN_LIMITS — not used on the public edge after composition.
packages/verae-zapier	/Users/marchon/datacubes/verae-zapier-api/verae-zapier	Zapier Platform CLI app (JS). Today talks to middleware with zmw_ keys; will talk to zappier x-api-key after PR 5.
vendor/zapier-platform		

Package / tree	Imported from	Role
	/Users/marchon/research/zapier-platform (upstream git@github.com:zapier/zapier-platform.git)	Official CLI/core/schema/examples. Reference only; do not fork for product code.
docs/00-sources/veraetime-openapi.yaml	https://api.veraetime.net/docs/swagger/openapi.yaml	Snapshot of live Timestamping Service API 1.0.0.
docs/00-sources/workspace-brief.md	Original README.MD in this repo	Feature list a-m and Grok share URL.
docs/00-sources/getting-started-research.md	/Users/marchon/research/veraere-research/07-integrations-zapier/zapier/getting-started.md	Research notes (paths still mention the old research workspace).
docs/01-product/zapier-billing-research.md	.../zapier/docs/zapier-billing.md	Zapier task pricing vs Verae meters.

research/zapier | /Users/marchon/research/veraere-research/07-integrations-zapier/zapier | Full vendor-research workspace: catalog scrapes, contacts, 15 verticals, cloned Zapier repos, playbooks, diagrams, TS scratch connector. node_modules / .venv / nested .git omitted. |

Not imported:

- any node_modules or Python .venv
- nested .git metadata inside cloned repos
- zapier.db, middleware data/ stores

Not yet wired: zapier's Zapier demo app does not call Verae. Verae middleware does not use zapier's rate card or portal.
