VERAE TIME × ZAPIER

02 modules and repos

[site/packages/overview/02-modules-and-repos.md](#)

2. Modules and independent repositories

Each runtime piece is its **own git repo** on Forgejo (git.georgelambert.org , SSH port 2223). The monorepo `master-zapier-plan-draft` is a snapshot of the workspace; do not treat it as the only clone path.

Independent repo	Package / path	What it does
overview	<code>packages/overview</code>	This high-level map
verae-nats-process	<code>packages/verae-nats-process</code>	Template for a new addressed NATS process
master-zapier-plan-draft	workspace root	Combined snapshot (<code>main</code> and <code>master</code>)
zappier-edge	<code>packages/zappier</code>	Metered HTTPS, portal, admin, Stripe; proxies Verae calls to middleware
verae-access-authz	<code>packages/verae-access-authz</code>	NATS authorization step (<code>authz.check</code>)
verae-access-web	<code>packages/verae-access-web</code>	Direct customer web plane
verae-access-api	<code>packages/verae-access-api</code>	Direct customer API plane (not Zapier)
verae-access-leaf	<code>packages/verae-access-leaf</code>	Server-to-server NATS leaf plane
verae-access-zapier	<code>packages/verae-access-zapier</code>	Zapier Platform plane only
zappier-account-balance	<code>packages/zappier-account-balance</code>	NATS source of truth for prepaid balances
zappier-customer-service	<code>packages/zappier-customer-service</code>	CS goodwill credits onto prepaid balances
zappier-sales-pricing	<code>packages/zappier-sales-pricing</code>	Sales per-customer tier / multiplier
zappier-accounting-export	<code>packages/zappier-accounting-export</code>	QuickBooks IIF + accounting CSV
verae-middleware	<code>packages/verae-zapier-middleware</code>	<code>/zapier/v1</code> , job wait, NATS publishers/workers
verae-zapier-app	<code>packages/verae-zapier</code>	

Independent repo	Package / path	What it does
		Full Zapier nouns (timestamp, wait, batch, hash + tree lookup)
verae-activate	packages/verae-activate	Activate-now (Add Numbers, Echo, SHA256, mock timestamp)
verae-request-splitter	packages/verae-request-splitter	Chain hash vs <code>archive.put</code>
verae-archive-worm	packages/verae-archive-worm	Bloom WORM node
verae-archive-aggregator	packages/verae-archive-aggregator	Merge archive replies
verae-tree-node	packages/verae-tree-node	Merkle leaf proofs (bulk summaries)
verae-fleet	packages/verae-fleet	Catalog, min copies, pause/restart, SSH hosts, operator console
verae-zapier-simulator	packages/verae-zapier-simulator	Trace console before <code>zapier-platform</code> push
zapier-user-docs	packages/zapier-user-docs	Customer signup → register → lookup
zapier-docs-master	packages/docs-master	Per-module <code>SUMMARY.md</code> + <code>NATS.md</code>
verae-ops	packages/verae-ops	Docker, Proxmox, VMs, dedicated hardware, linking services

Libraries that are **not** separate Forgejo apps today: `verae-chain-client` (inside middleware), job-poller and webhook-deliver (middleware workers, fleet-spawned).

Per-module NATS contracts: `zapier-docs-master`.
