VERAE TIME × ZAPIER

Service → machine and DNS host names

<site/packages/overview/11-hostnames.md>

Host names

All of the running Verae Time × Zapier processes on **2026-09-11** live on one machine unless noted.

Machines

Fleet id	Hostname	Address	Role
local (NS1 all-in-one)	NS1.GEORGELAMBERT.ORG	70.88.205.138	Control plane + archive workers + keep
ns1 (SSH worker profile)	NS1.GEORGELAMBERT.ORG	70.88.205.138	Same box; SSH spawn unused while all-in-one is local
lan-134	(none yet)	70.88.205.134	Disabled until SSH works

Loopback on that box is 127.0.0.1. Do **not** publish NATS :4222.

DNS that already exists

Hostname	What it is
NS1.GEORGELAMBERT.ORG	The server
zapier.georgelambert.org	Documentation catalog (Caddy → /SSD2/sites/zapier.georgelambert.org)
git.georgelambert.org	Forgejo (SSH 2223)
api.veraetime.net	Live Verae chain (not this lab; lab uses <code>MOCK_VERAE</code>)

Service → hostname (NS1 all-in-one)

HTTPS names under `*,zapier.georgelambert.org` are live in Caddy on NS1 (wildcard DNS already pointed here). Loopback services stay off the public internet.

Service	Port	Bind now	Machine hostname	Suggested service hostname	Public IP
Operator console (fleet)	3850	0.0.0.0	NS1.GEORGELAMBERT.ORG	fleet.zapier.georgelambert.org	LA op
