VERAE TIME x ZAPIER

S2S NATS leaf plane

site/packages/verae-access-leaf/README.md

verae-access-leaf

Server-to-server leaf node access plane. Remote machines connect as NATS leaf nodes (or POST `/forward` with a leaf token). They never get the core billing subjects.

Forgejo: <https://git.georgelambert.org/marchon/verae-access-leaf>

```
remote leaf → verae.access.leaf.in → authz.check → verae.archive.put | jobs.*
```

Denied: `verae.billing.balance.adjust`, `verae.billing.statement.get`. A compromised WORM/leaf cannot credit customers.

`LEAF_TOKEN` required. Port `:3023`. Do not publish NATS `4222` to the internet; leaf nodes use a private leafnode port / tunnel.
