VERAE TIME x ZAPIER

Direct web access plane

[site/packages/verae-access-web/README.md](https://zapier.georgelambert.org/site/packages/verae-access-web/README.md)

verae-access-web

Direct web access plane. Customer browsers hit this process, not Zapier and not the NATS port.

Forgejo: <https://git.georgelambert.org/marchon/verae-access-web>

Every NATS hop is `verae.access.web.*` → `verae.access.authz.check` → internal `verae.billing.statement.get` (reload only, not CS credits).

Route	Job
GET /health	{ plane: "web" }
GET /statement/:id	Authz then statement
POST /reload	Authz then <code>balance.adjust</code> kind=reload

Port `:3021`.
