VERAE TIME × ZAPIER

03 connect zapier

site/user-docs/03-connect-zapier.md

3. Connect the Zapier app

1. Sign in at zapier.com (or your Zapier workspace).
2. Create a Zap → add **Verae Time** (or **Verae Activate** while the full app is in private invite).
3. When Zapier asks for authentication, paste:
 - **API key** from the zappier portal.
 - **API base URL** if the operator asked you to (hosted edge). Leave blank only for local-mockActivate steps that do not hit the chain.
4. Click **Test**. Zapier calls zappier-edge over HTTPS ([whoami](#) / a cheap GET). You should see your email and plan. A 401 means the key was regenerated or mistyped.

You do **not** enter NATS URLs, Verae JWT, or [api.veraetime.net](#) credentials. Those stay on middleware.

Plans

Plan	Typical access
Free	Single timestamp, lookup, Add Numbers / Echo / SHA256 helpers
Paid	Batch timestamps, wait-for-certificate, attached metadata, tree-node lookup

A 403 `PLAN_UPGRADE_REQUIRED` means that Zap step is paid-only. A 402 means you exhausted included credit — reload in the portal (the error should include an upgrade URL).
